

WordWall

more than just voting

Learning is about more than one right and three wrong answers. So why's that all you can do with a voting system?

WordWall is different. It's an interactive system that you can use from start-to-finish throughout a lesson. It takes less than a minute to prepare most resources and students can interact with the content in many different ways - they can even generate it themselves. A smarter alternative to thinking up three hundred wrong answers!

WordWall allows students to contribute their own ideas, which they can text-in via our response pads. The latest version supports both predictive and standard mobile phone texting. Students can also interact with the board using gamepad controls; categorizing keywords, rearranging comprehension exercises, matching up definitions or using opinion scales to explore diversity.

"The predictive text system is a really quick way to allow students to contribute ideas. It's just like a mobile phone. Even students, who are too shy to raise their hand, have to share their opinion with the rest of the class. Moreover, with WordWall, with just one click you can mark their contribution out for praise."

- Charlie Boshier, Science Teacher

There's something for every subject.

In Maths, you can use the arithmetic wizard to generate a grid of addition and subtraction questions. All the players chase around the board, trying to answer the most questions, in the quickest possible time.

Or in an English lesson, create a blank wordwall with a tile for each member of the class. Ask each student to text-in a quality that makes characters' heroic. Then ask the class to rank them in order of their importance.

In Science, you can create a wordwall with pictures of foodstuffs and household items and ask students to guess whether they're acidic or alkali.

WordWall isn't just about assessment. But we make it easy for you to track your students' progress.

There are simple pie charts and bar graphs that can tell you in a moment, whether your class has 'got it' or not. You can also export individualised answer logs into Microsoft Excel or your MLE's electronic mark books.

cleverclick pads

Our pads aren't just worth the hassle. They're no hassle.

Simple to set-up and dependable, there are no hidden complications. You don't need to register devices or install multiple drivers. The batteries will last for 50 hours continuous use and are easily replaceable. Also, wireless RF devices don't require a direct line of sight - as is the case with infra-red systems. You can use them in class sets of 32, or combine them for use in large lectures or assemblies.

Class Set	Transmission	Power	Battery Life	Range	Connection	Channels	Includes
32 pads	Radio frequency	2 x AAA	12 months	35m	USB (A-B)	16	Receiver, bag, cable, CD

□ the interactive interface

WordWall is designed to harness the interactivity of an electronic whiteboard or data projector.

WordWall isn't just a voting system, it's an interface especially designed for interactive whiteboards and data projectors. Of course, Powerpoint is great if you want to produce static slides. But why spend thousands on all this new technology, to produce passive presentations that offer no greater level of student engagement than an acetate overhead projector and a felt tip pen?

With WordWall, you don't need to know about magic wands, ticker tapes or the myriad tools that make other software so complicated. All you need to do is select an activity from the twenty wizards (ten in the standard version) and type in the content - WordWall handles the formatting, creating a series of tiles on screen. You can mark, hide and move these tiles via your board pen or mouse.

In WordWall, content can easily be moved from one exercise to another. It's a whole-lesson tool - not just a five minute gimmick.

When you, or your class, create an exercise, with two clicks you can convert it into another WordWall wizard. For example, a class texts-in 32 ideas about causes of climate change. By converting it into an opinion exercise, you can get each student to rate the importance of the factors they've contributed. You could then convert it into a definition match-up and ask students to put alongside each cause of climate change, a potential solution to that problem. The teacher can easily mark and annotate the student's contributions; highlighting misconceptions and stimulating debate.

□ wordwallweb

Every day, thousands of teachers prepare the same lessons. Wouldn't it make sense if we all worked together?

When you save a WordWall file, you're asked whether you want to share it with other teachers. With one click it's uploaded to our content portal - the WordWallWeb - where other teachers can search for it by keyword. They can adapt it for different ability levels, add pictures or sound, or even

convert it into a different type of wizard. This means the resources don't just increase in quantity, they also improve in quality, through a process of peer review. The chances are, whatever lessons you're preparing for, someone else has already done it.

Visit wordwallweb.com and you'll also find wordwalls with topical headlines and pictures, generated every day at 5am from news feeds provided by the BBC, Yahoo!, NASA and others. Great activities for morning registration!

"The WordWallWeb can be a real timesaver. During one lesson, I created a vocab wordsearch and next time I looked, a teacher had converted it into a category quiz with images. It made a fantastic starter for my next class."

- Emma Hazelgreaves, Languages Teacher

officewall

Quite simply the simplest response system ever.

The CleverClick pads are also compatible with Microsoft Office - which means you can integrate voting and texting into your existing Powerpoint documents. With our OfficeWall plug-in, two icons sit under your MS Office toolbars. One draws text boxes that allow you to receive text messages from the pads. The other creates a dynamic graph or table that allows you to run quick votes. It's that easy. OfficeWall is available as an upgrade alongside both the Standard and Professional versions of WordWall.

features summary

We offer a choice of features for different budgets and needs.

WordWall CleverClicks come bundled with the Standard Edition. It offers greater functionality than our competition, at a much reduced price. Both versions of WordWall are also available as software-only products, for use with interactive whiteboards and projectors.

The Professional Edition features twice as many wizards as the Standard (see blue box on previous page), but also extra interactive games to play upon them. Standard text input, public poll, number input, answer, joypad and quiz are in the Standard Edition, whereas jump, pinball, predictive text, joypad answer and joypad grab are only available in the Pro version.

Anyone can use WordWall.

WordWall is easy. In fact, we've found most teachers get to grips with its basic functionality within half-an-hour. Extensive features don't have to make things excessively difficult. But for those who need a helping hand, there's training videos, getting started guides, frequently asked questions and a support forum - all available from wordwallweb.com.

WordWall allows every teacher to easily create interactive lessons - where learning is fun and every voice is heard.

"In my subject, there's not much need for voting systems, but the text facility is really useful - even the quiet kid gets his point across. Also, the pads represent fantastic value for money. Our previous system cost twice as much and never left the cupboard!"

- John Roberts, English Teacher
